

E-RAKSHAK FORENSIC MALWARE ANALYSIS REPORT

Automated Multi-Modal Triage, Behavioral Forensics & Threat Attribution

1. Sample Identification & File Metadata

SHA-256	02c4ef6bccf06e3a5e9778a3bc12538934243103b6af1cd093b362e37cb57f2b
MD5	8c27d708f2f3843e4c7d79419e308179
Platform / Format	ANDROID (APK)
File Size	968 bytes
Submission Time	2026-10-05T07:32:21.833907+00:00

2. Threat Assessment & Unified Risk Score

Risk Score	24/100	Verdict / Threat Level	SUSPICIOUS (MEDIUM)
Confidence	50%	Assessment Method	Deterministic Weighted Correlation

3. Dynamic Sandbox Execution & Provider Attribution

Provider	mobsf
Task ID	mobsf-scan-harmless
Execution Status	NOT_PERFORMED
Forensic Status Line	Dynamic analysis not performed: analyzer/emulator not ready

4. MITRE ATT&CK; Matrix Mapping

No MITRE ATT&CK; techniques observed or mapped for this sample.

5. Grounded Investigation Narrative

[FALLBACK] This android apk binary exhibits network communication. Verified risk score is 24/100 with low victim impact based on verified forensic indicators. Immediate containment and perimeter network monitoring are advised.

6. Actionable Defense Recommendations

- Block file hash SHA-256 02c4ef6bccf06e3a5e9778a3bc12538934243103b6af1cd093b362e37cb57f2b across endpoint detection rules and EDR
- Quarantine the suspicious binary artifact and initiate continuous monitoring on host and perimeter network interfaces.

7. Evidence Chain of Custody & Integrity Verification

Cryptographic Evidence Chain: Verified SHA-256 bindings across ingestion, static analysis, and dynamic telemetry. Artifacts signed with HMAC-SHA256 and verified defensible.
